

PROFESSIONAL SUMMARY

Cross—layer Solutions Architect with 15 years of progressive engineering experience specializing in legacy modernization and monolithic system decomposition into resilient, cloud—native microservices architectures. Bridges physical infrastructure failure modes (L1 fiber/FTTH) to distributed multi—cloud platforms (L7 K8s/GitOps) and quantitative risk modeling. Empaneled Subject Matter Expert across global expert networks (VisasQ, Coleman Research), delivering retained technical due diligence and modernization assessments for institutional investors. Integrates standardized reliability engineering (IEC 60812 FMEA, IEC 61025 FTA) with capital governance principles to eliminate single points of failure (SPOF), optimize deployment security, and protect enterprise EBITDA integrity.

CORE COMPETENCIES & DOMAIN EXPERTISE

Cloud & Modernization: Monolith—to—Microservices Decomposition, GCP, AWS, Azure, Alibaba Cloud, Kubernetes (GKE/EKS), Docker, Terraform (IaC).

DevSecOps & Platform: GitOps (Flux CD), CI/CD Security Automation (OWASP ZAP, SonarQube), Zero—Touch Provisioning, Fault Domain Isolation.

Reliability & Risk: IEC 60812 (FMEA), IEC 61025 (FTA), ISO 31000 Risk Governance, SPOF Elimination, Root Cause Analysis (RCA).

Governance & Compliance: PE Technical Due Diligence, FTTH Rollout QA (\$93M Scope), BSS/OSS ETL Reconciliation, OJK/BI Compliance.

CAREER EVOLUTION & PROFESSIONAL EXPERIENCE

VisasQ Inc. & Coleman Research Group — *Empaneled Industry Advisory Council Member*

Sept 2025 – Present | Global (Remote)

- Deliver retained, NDA—governed technical due diligence and modernization architecture assessments for Private Equity (PE) firms and institutional investors evaluating cloud migration feasibility and telecom backbones.
- Model distributed fault isolation, Single Point of Failure (SPOF) mitigation, and operational risk exposure across legacy—to—cloud transitions using IEC 60812 and IEC 61025 standards.

PT Altha Dyanusa Consulting — *Enterprise IT Advisory Consultant*

Jan 2023 – Feb 2025 | Jakarta, ID

- Formulated enterprise multi—cloud blueprints and ISO 31000—aligned IT risk governance frameworks for institutional clients modernizing monolithic infrastructure into cloud—native environments.

Independent Technology & Architecture Mandates — *Principal Architect & DevSecOps Lead*

Feb 2015 – Dec 2022 | Indonesia

- **PT Meteor Inovasi Digital (Sep—Dec 2022):** Directed 4—month multi—cloud legacy migration (AWS/GCP/Alibaba Cloud); decomposed VM—based monolith into containerized Kubernetes microservices using Terraform, achieving 99.9%+ availability and zero—downtime cutover.
- **PT Kredit Pintar Indonesia (Jul—Sep 2022):** Architected GitOps delivery workflows (Flux CD) on Alibaba Cloud, decoupling stateful legacy FinTech workflows into stateless, OJK—compliant microservices with automated audit pipelines.
- **PT Tri Adi Bersama / Anteraja (Nov 2021—Jul 2022):** Scaled container orchestration (GKE/EKS) for 120 decoupled logistics microservices; embedded CI/CD security gates (OWASP ZAP/SonarQube), mitigating 60% of critical vulnerabilities during high—concurrency peak operations.
- **PT Hashmicro Solusi Indonesia (May—Oct 2020):** Automated monolithic ERP cloud provisioning and migration pipelines using Terraform IaC, reducing client environment provisioning lead time by 70%.
- **PT Dimension Data Indonesia (Feb—Jun 2015):** Engineered MPLS backbone optimization for Tier—1 banking clients using SolarWinds network telemetry to resolve latency bottlenecks across critical payment infrastructure.

PT Telkom Akses (Telkom Indonesia Group) — *Principal Operational and Compliance Manager*

Apr 2013 – Oct 2014 | Jakarta, ID

- Assigned within the **Directorate of Operation** to execute field quality compliance audits and service fulfillment testing across the nationwide copper—to—FTTH rollout (IDR 1.5T program scope).
- Applied IEC 61025 (FTA), IEC 60812 (FMEA), and ISO 31000 Risk Governance to identify fulfillment failure modes, achieving a 20% defect reduction during testing with zero capital asset discrepancy.
- Built ETL data reconciliation scripts (Oracle, PostgreSQL, SOAP) linking physical field network inventory with BSS/OSS platforms (I—Sisca, TenOSS) to maintain audit—ready asset records.

Biznet Networks — *Customer Care Specialist*

Oct 2011 – Oct 2012 | Jakarta, ID

- Handled enterprise customer inquiries, logged connectivity issues, and coordinated trouble—ticket tracking via CRM.

VERIFIED CERTIFICATIONS & CREDENTIALS

- **GCP:** Professional Cloud Architect
ID: ac6c40d564fc4911b48506b04f269dac
- **GCP:** Associate Cloud Engineer
ID: 55864fb403294d648d9d2130326a0842
- **AWS:** Generative AI Practitioner — Cloud Quest
ID: 319f538b—8769—4719—b93f—29b81814900c

ADVANCED TECHNICAL TRAINING

Azure AI & Data: AI—102: Azure AI Solutions (Generative AI · Knowledge Mining) · DP—100: Data Science · AI Agents (Azure OpenAI & Semantic Kernel).

Cognitive & Security: AI—3003: Azure NLP · AI—3004: Vision · AI—3002: Doc Intelligence · Azure DevOps Pipeline Security · Serverless Container Apps.

EDUCATION & RESEARCH

University of Mercu Buana

Bachelor of Economics (S.E.) | Mar 2016 – Oct 2018, GPA: 3.17 / 4.00

Thesis: Hakim, Lukmanul. (2018). Operational Risk Analysis Using Fault Tree Analysis and Failure Mode and Effect Analysis in the Process Testing of the FTTH Triple Play (IndiHome) Fulfillment System (Undergraduate thesis). University of Mercu Buana Jakarta.
